

NO STOP LAKE NO STOP LAKE

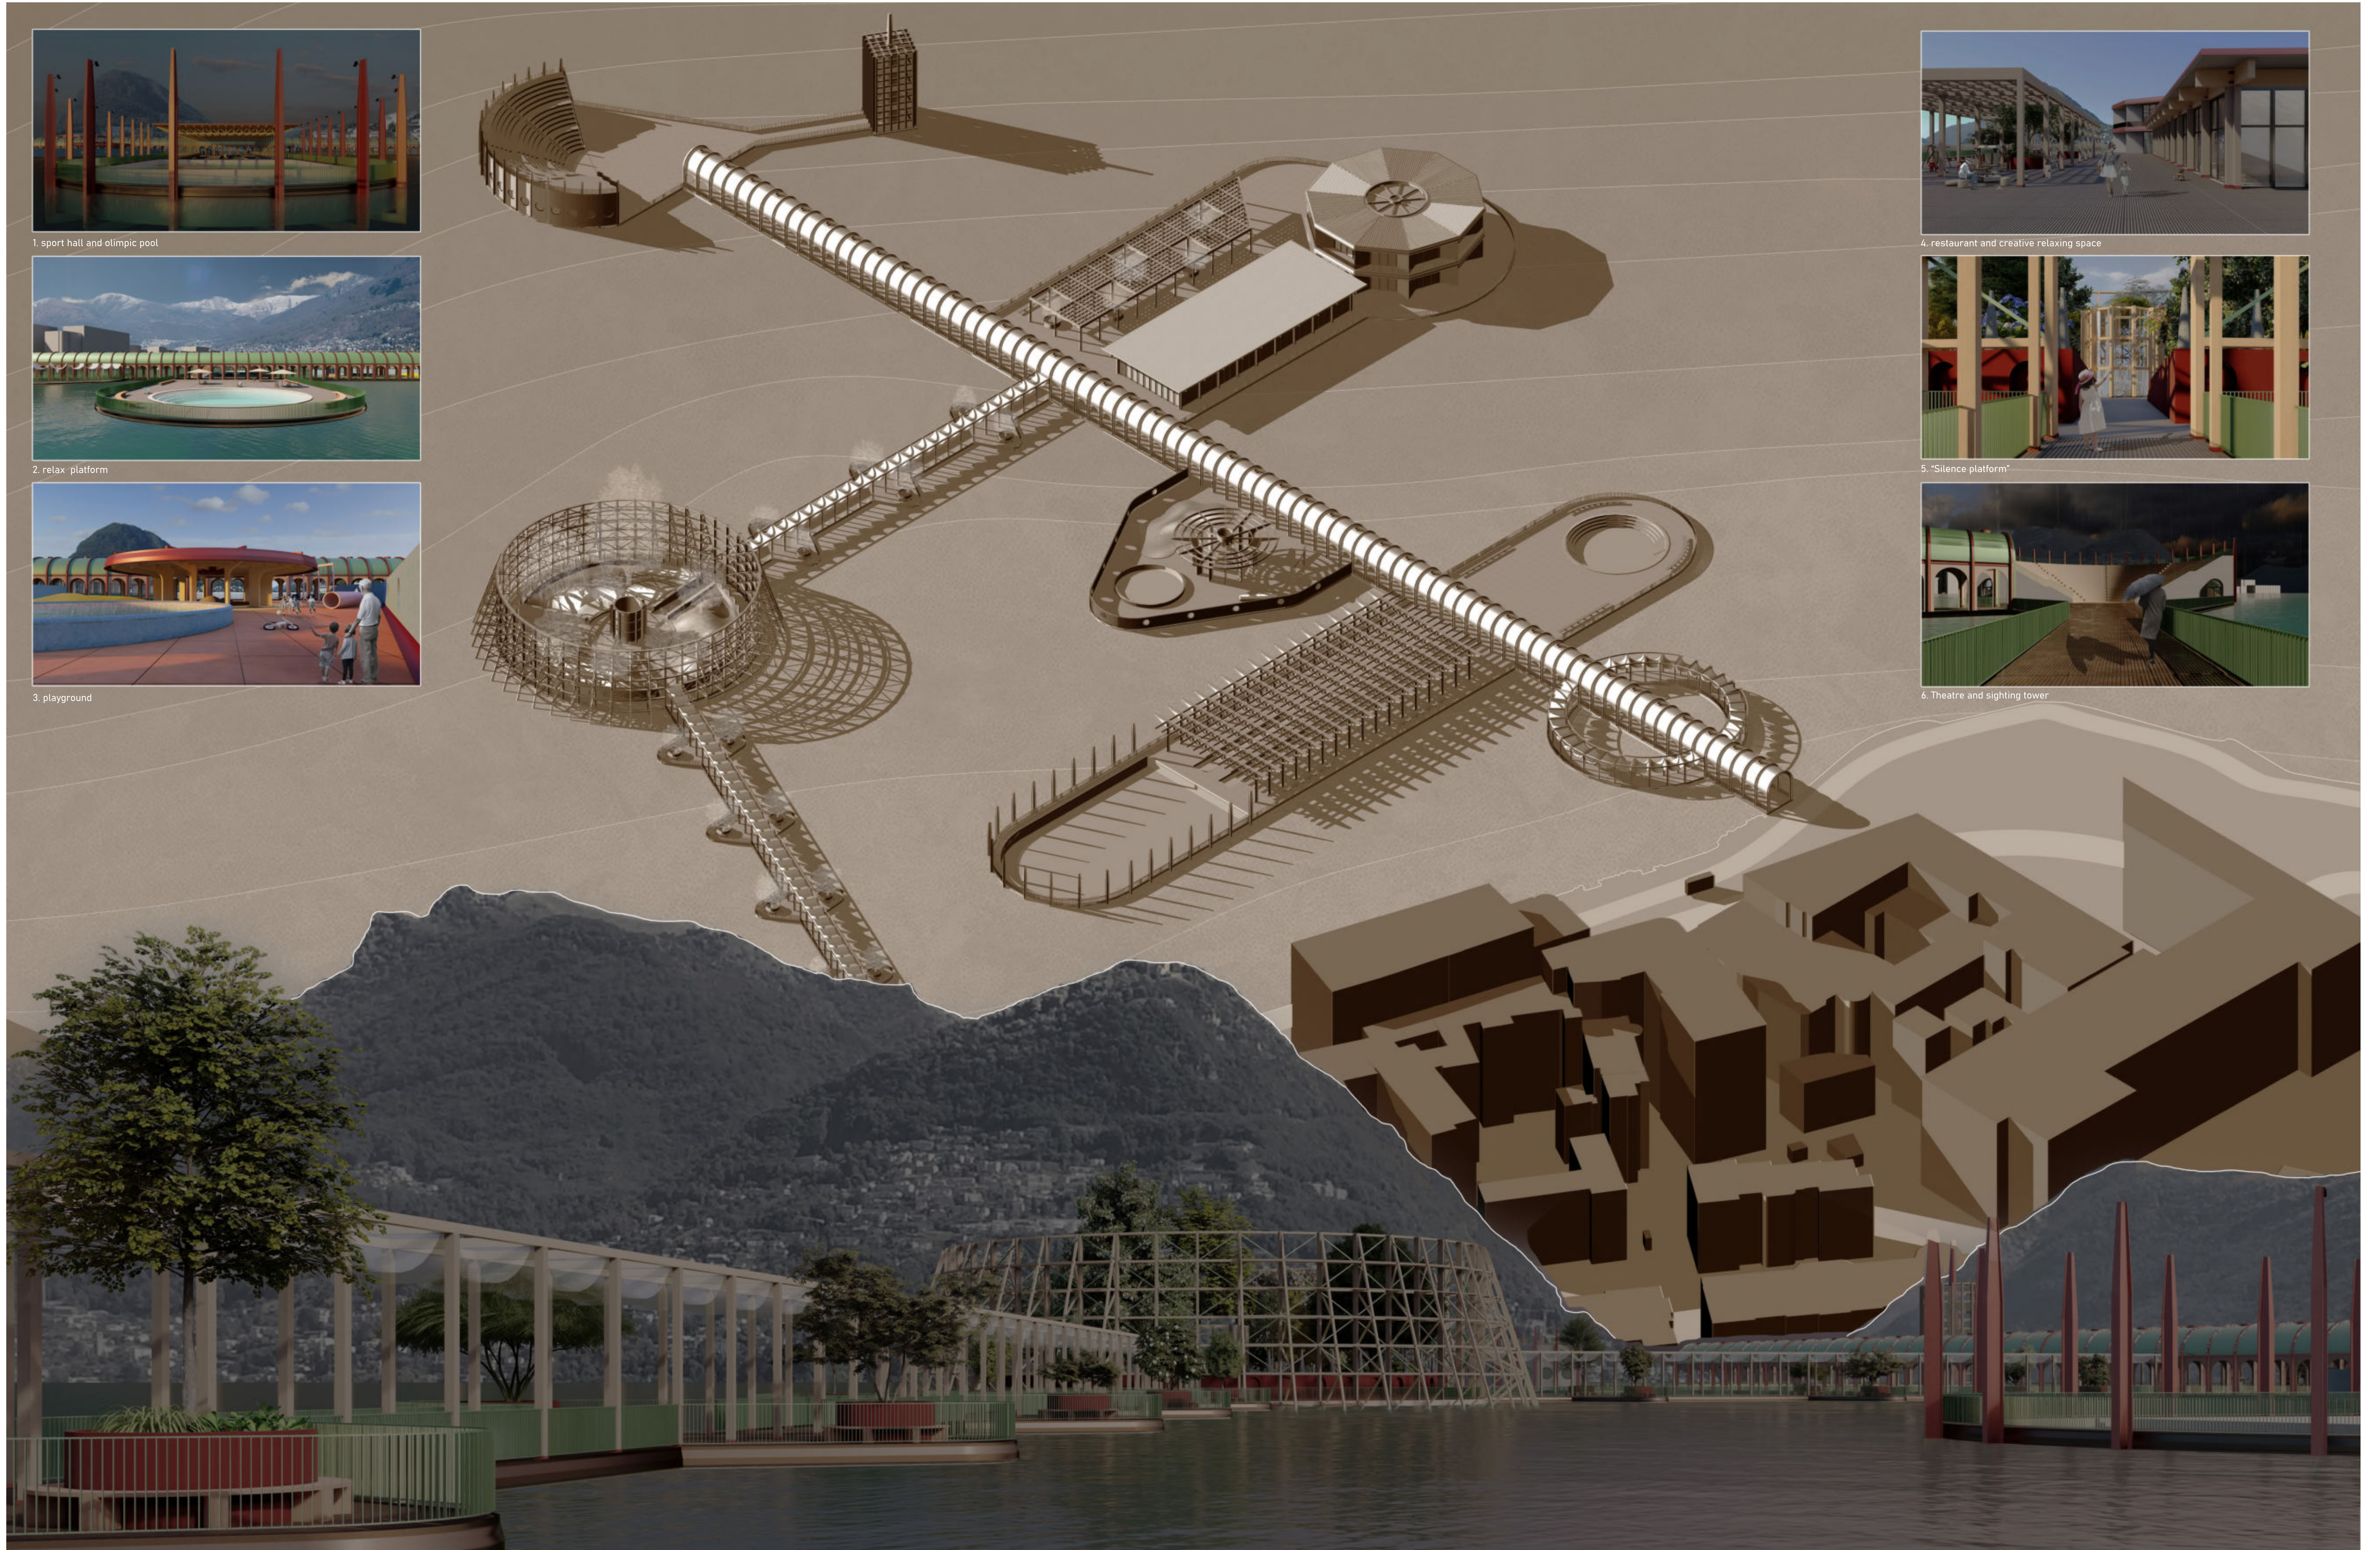

GENESI PROGETTUALE - PROJECT GENESIS

Nowadays, especially in the last few decades, the city has become a place where the rhythm is stressful and people can't actually feel the nature and the urban landscape. The genesis of the project was born from the intent of building a structure which both expands the city on the lake and the lake on the city, creating more than a viewing scenery. "No stop lake" lengthens the lines of the city of Lugano and creates platforms which let people look around and feel the pace of nature, doing what they most like.

The structural and architectural concept comes from different international references which helped through the design of each singular intent.

The project takes into consideration the 17 global goals, especially the number 11, 13 and 15, through the realization of green boulevards, accompanying to the center of the project, the 'Silence platform', a green fence where nature is able to explode. Furthermore the realization of the buildings' structure is conceived with materials which can be recycled, following an LCA program, just like steel and Swiss wood.

Another important issue taken into consideration is the well-being of people, in fact each "platform" of the project wants to provide different kind of well-being for a variety of people of different ages.

1. sport hall and Olympic pool

2. relax platform

3. playground

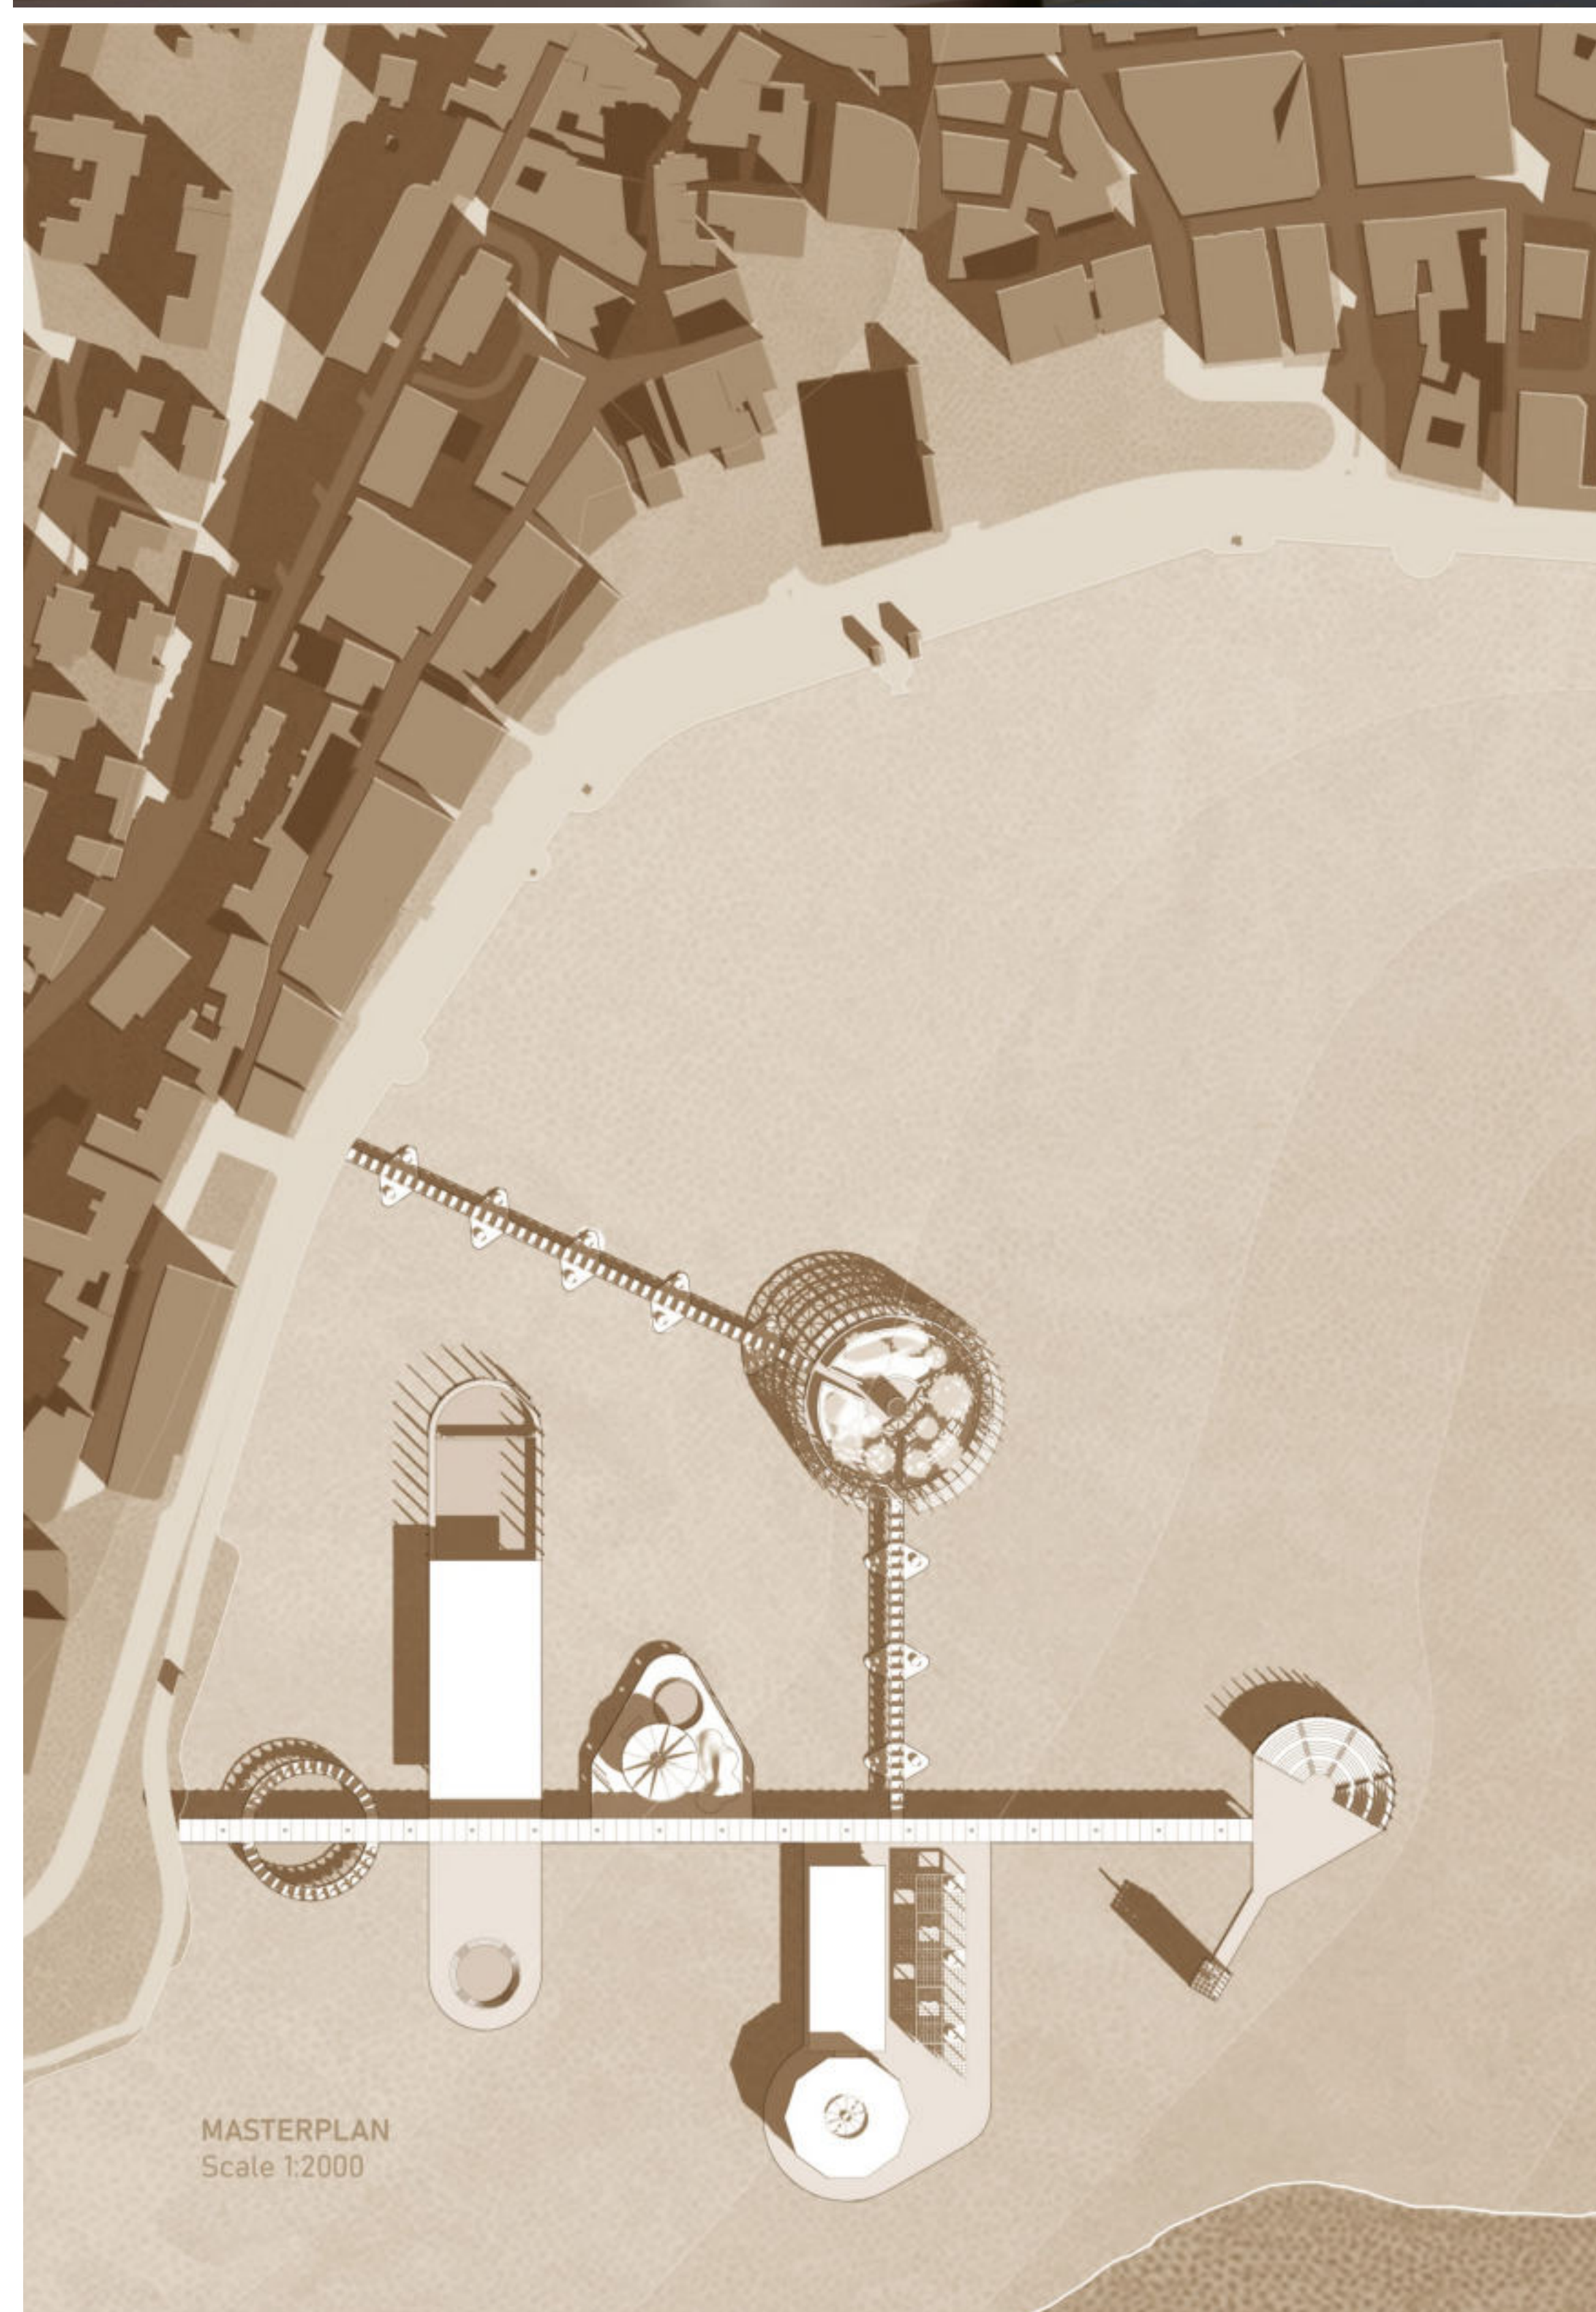

4. restaurant and creative relaxing space

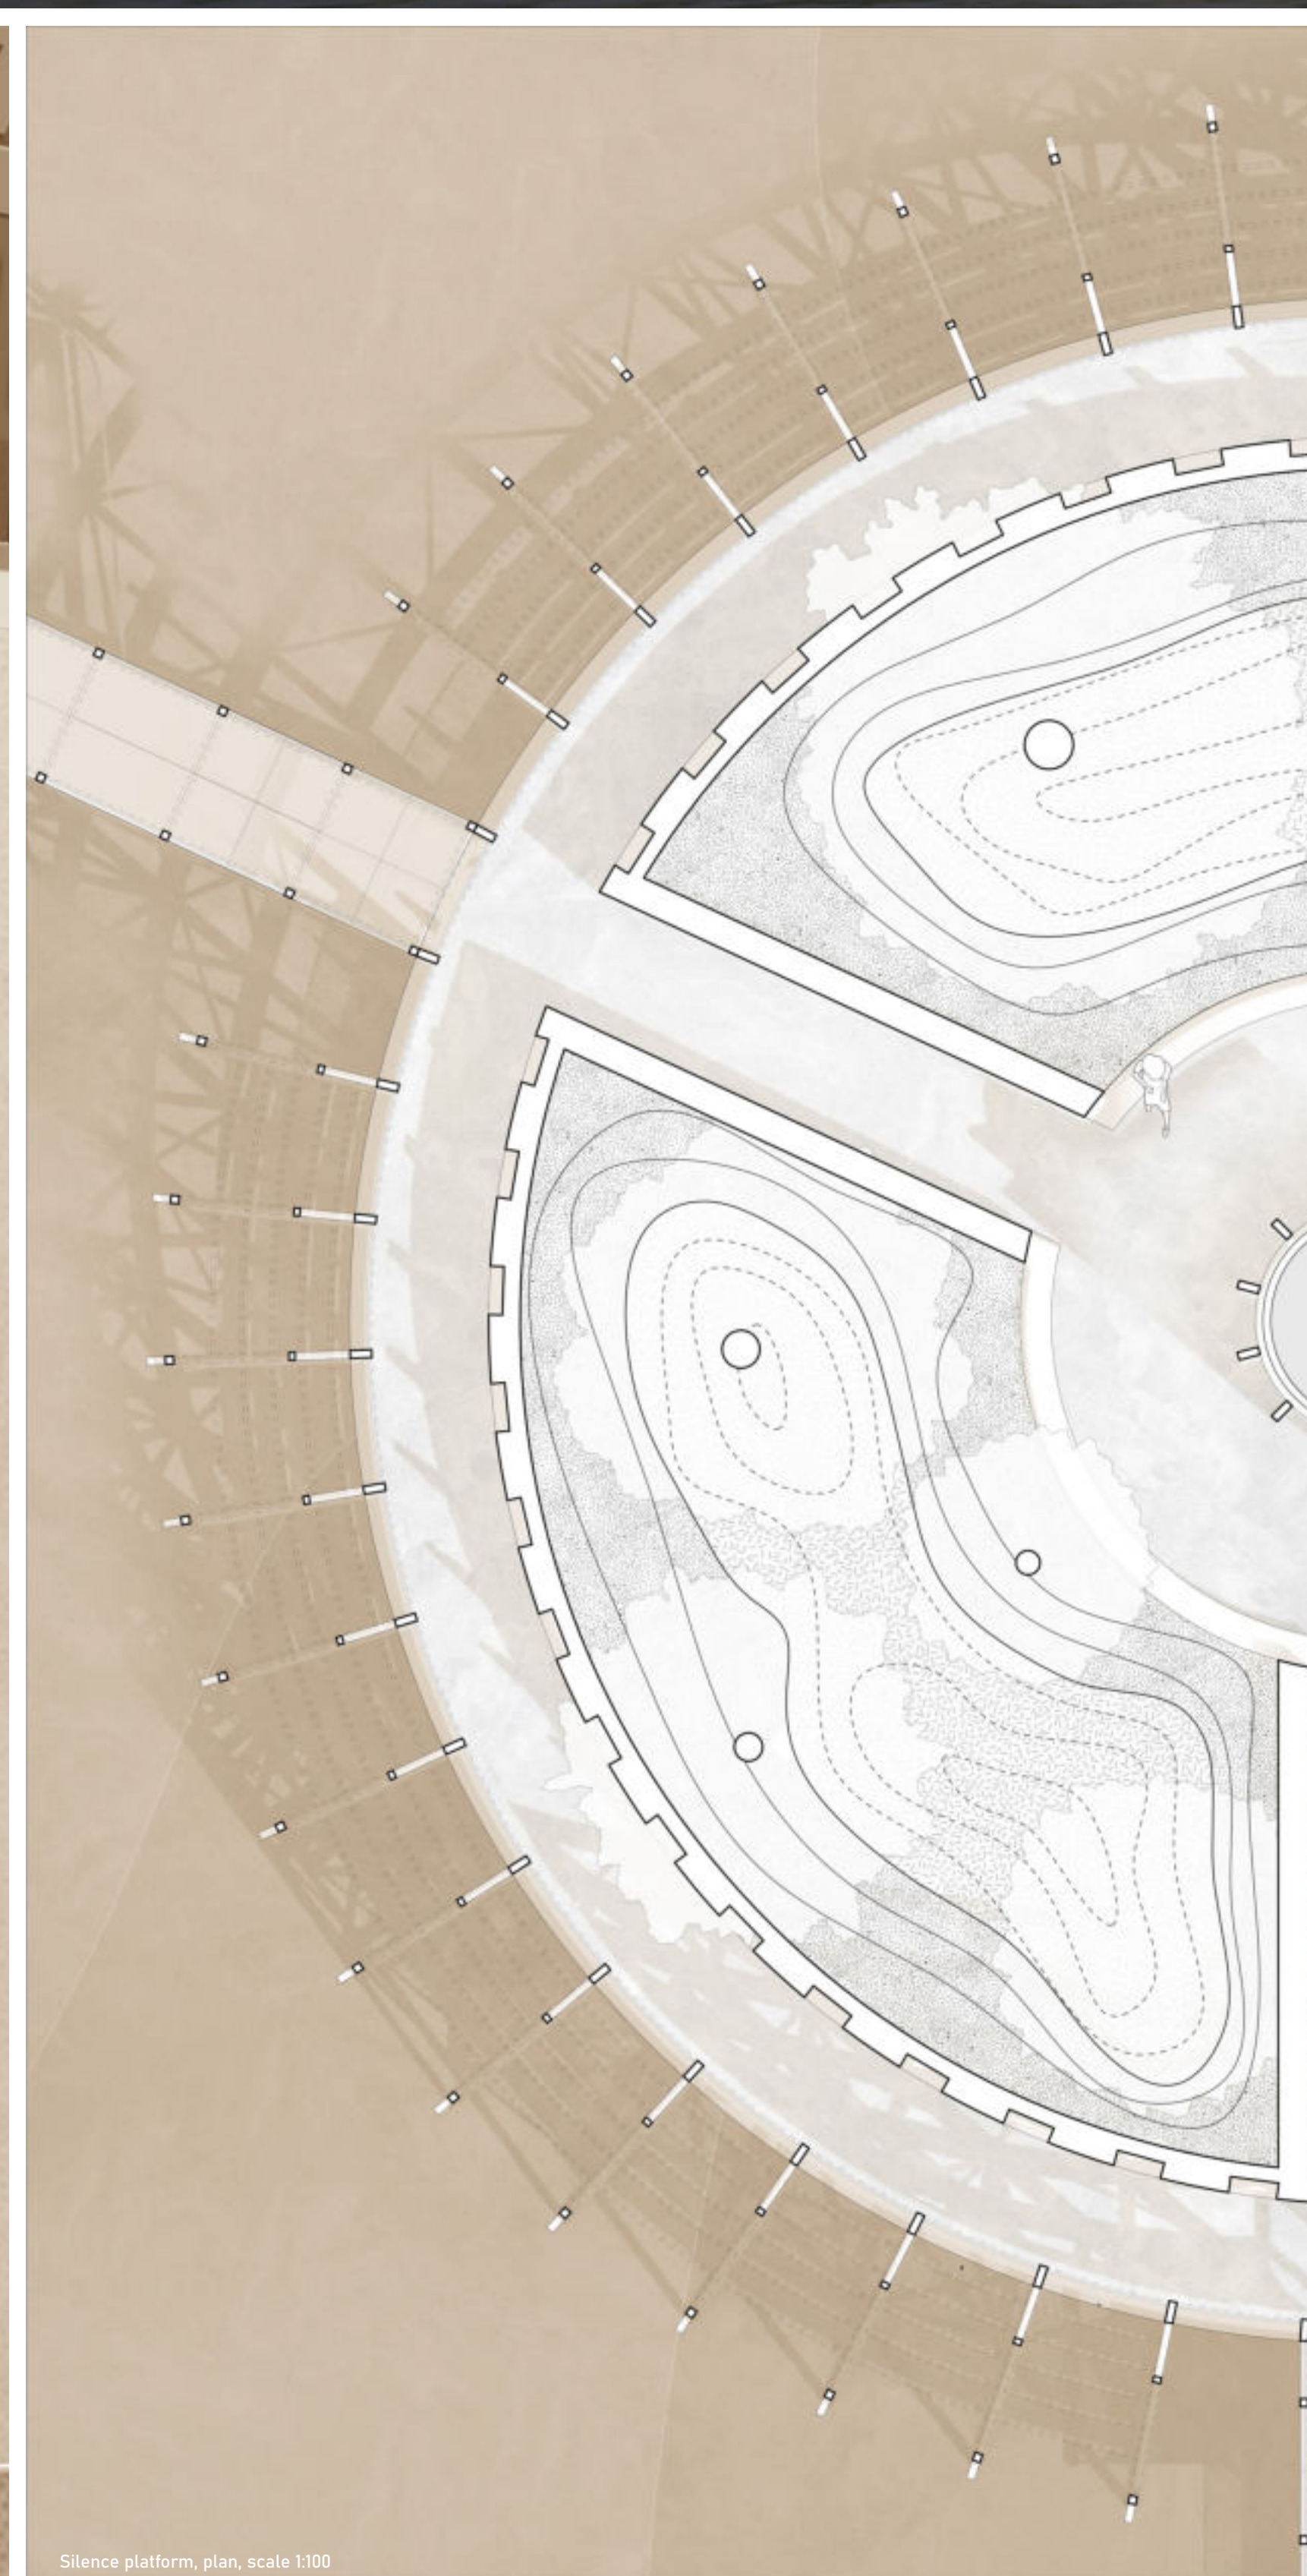

5. 'Silence platform'

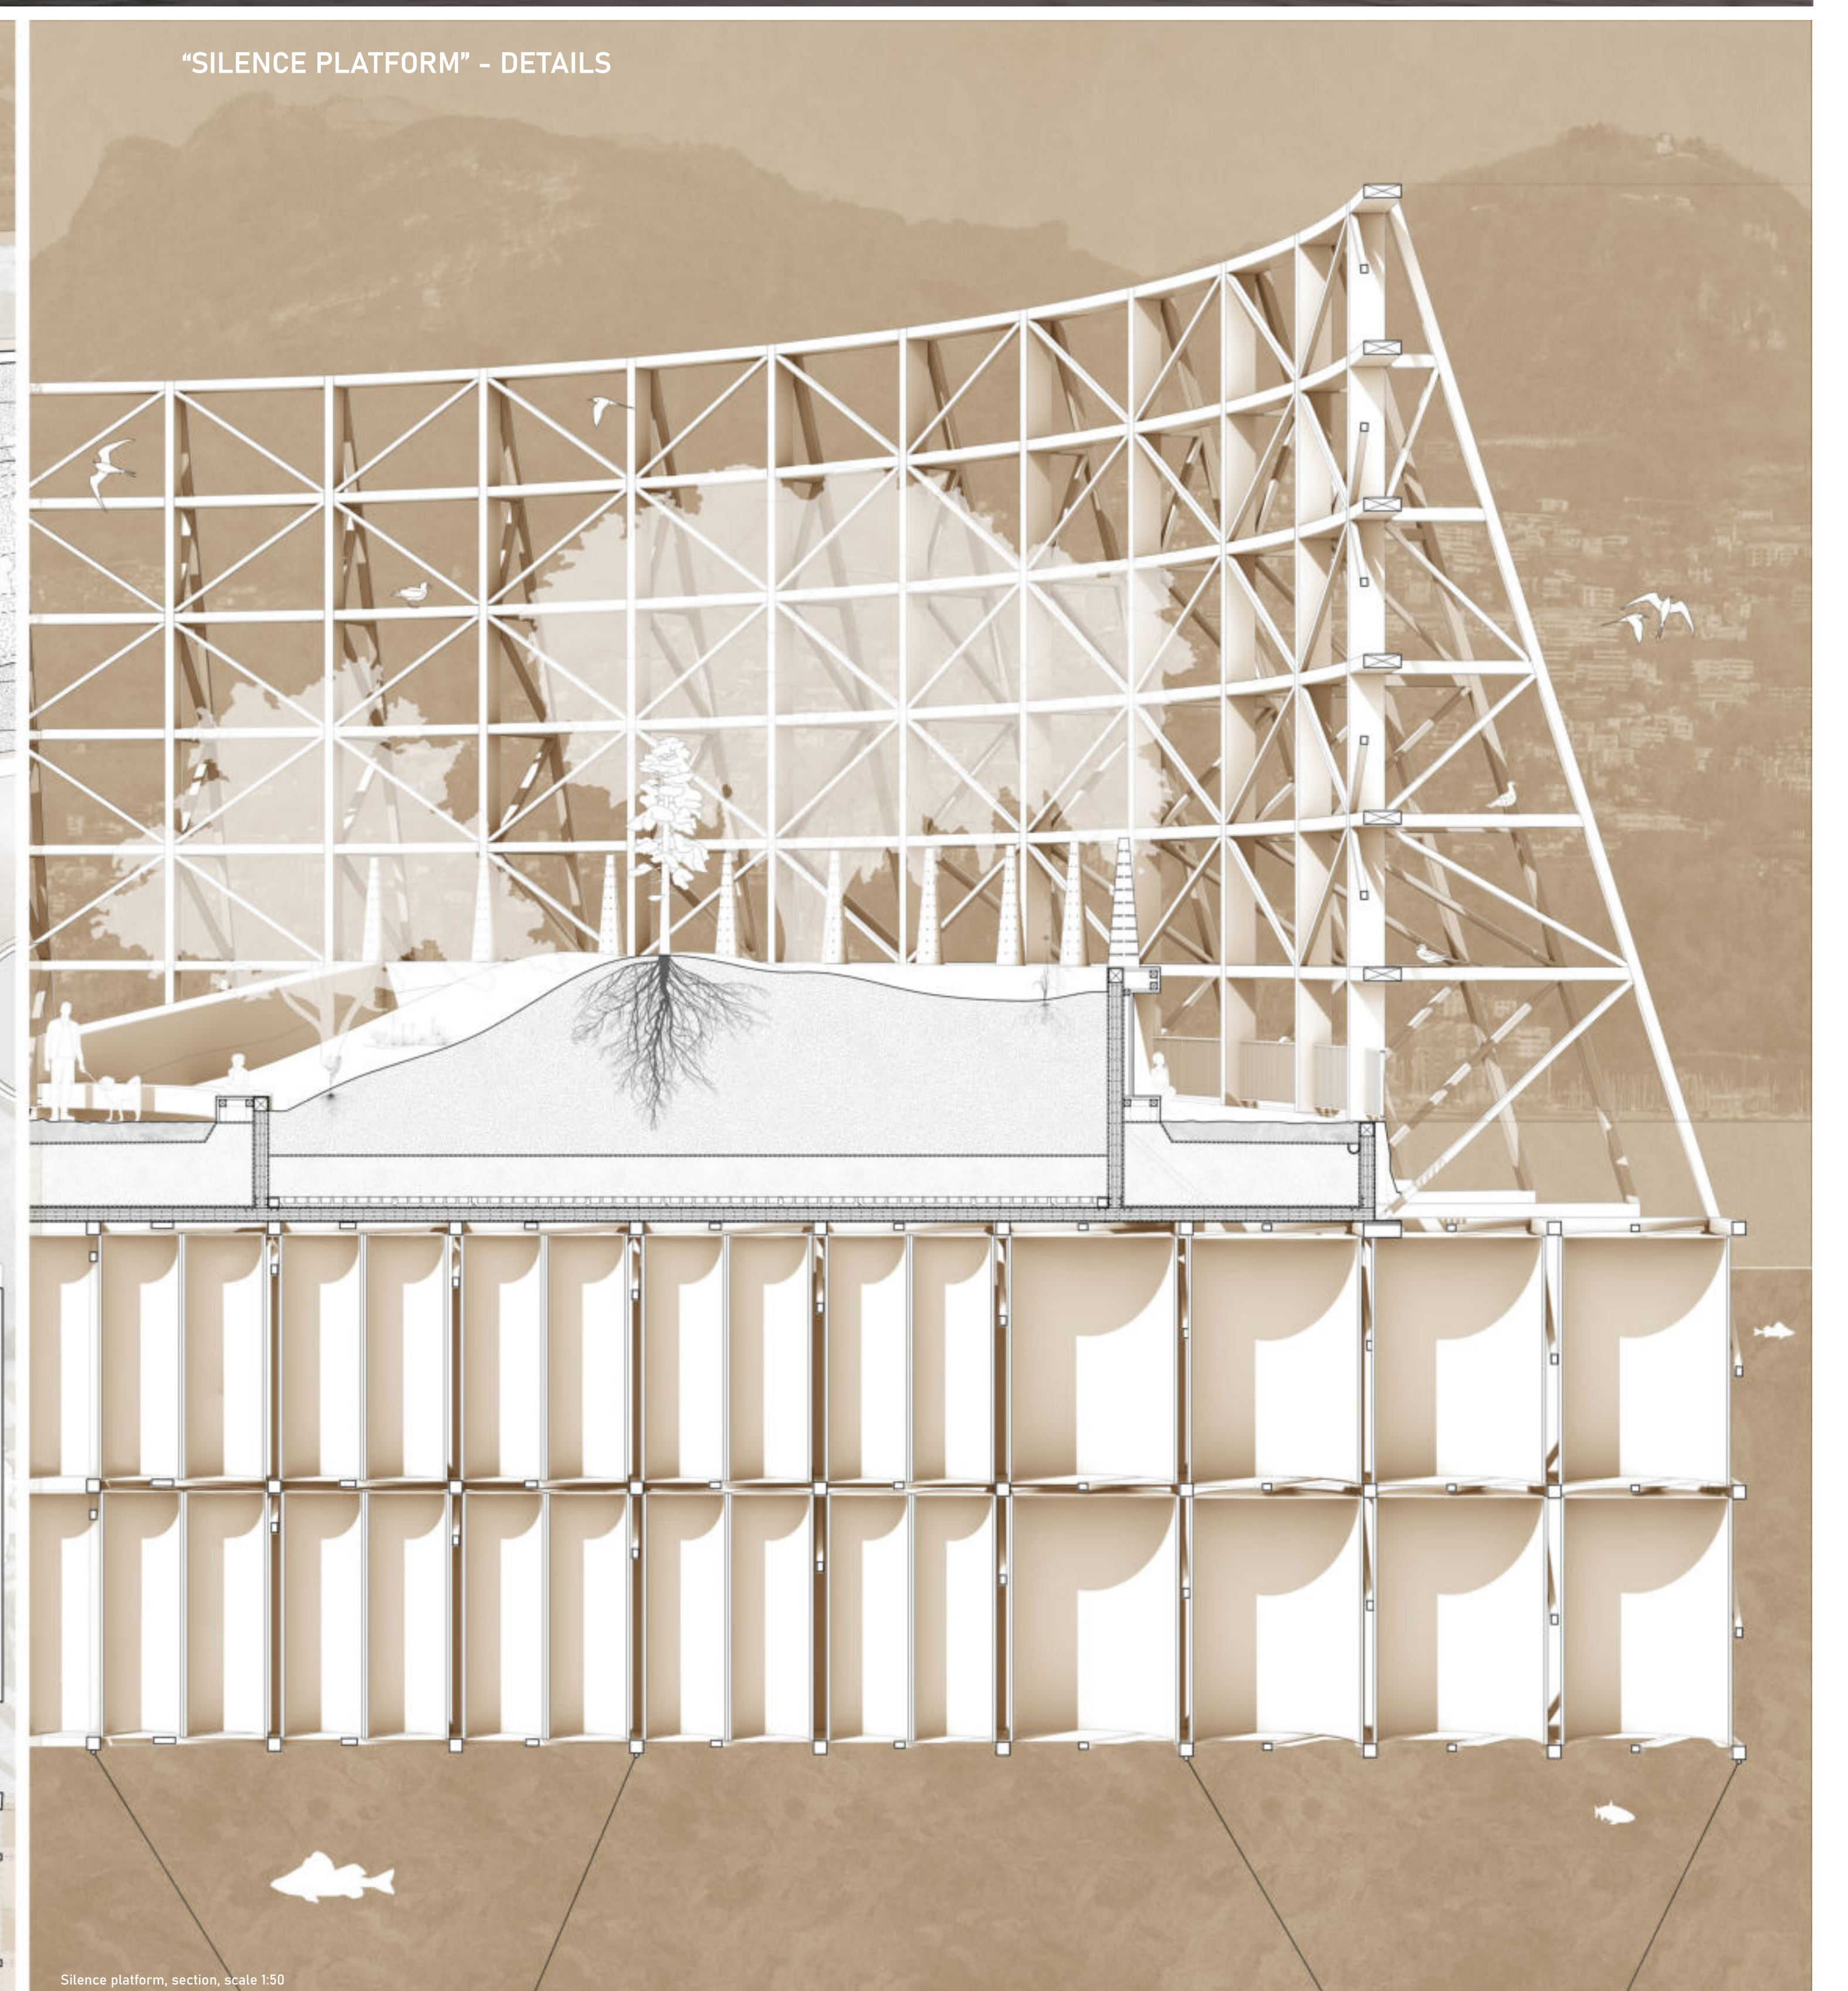

6. Theatre and sighting tower
